EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Johnny Ma on January 15, 2010.

Claims 19, 25, 26, 30, 31, and 35 have been amended to read as follows:

19. A method of an image display device for displaying an image, the method comprising:

receiving, by the image display device, via a network, bio-information on each of a plurality of persons under measurement;

generating, by a processor in the image display device, an image including objects that interact with each other on the basis of relationships among the bio-information of the plurality of persons under management received in the receiving; and

displaying the image generated in the generating.

25. An image displaying system, comprising:

a plurality of bio-information acquiring devices including

a bio-sensor configured to measure bio-information on each of a plurality of persons under measurement, and

a first communications interface configured to transmit the bio-information; and
an image display device including

a second communications interface configured to receive the bio-information on the plurality of persons under measurement, transmitted from each of the plurality of bio-information acquiring devices,

an image generating processor configured to generate an image including objects that interact with each other on the basis of relationships among the bio-information on the plurality of persons under measurement received by the second communications interface, and

a display unit configured to display the generated image,
wherein the plurality of bio-information acquiring devices and the image display device are located in different places and connected to each other via a network.

26. An image display device connected, via a network, to a plurality of bio-information acquiring devices configured to acquire bio-information on each of a plurality of persons under measurement, the image display device comprising:

a communications interface configured to receive the bio-information on the plurality of persons under measurement transmitted from each of the plurality of bio-information acquiring devices;

an image generating processor configured to generate an image including objects that interact with each other on the basis of relationships among the bio-information of the plurality of persons under measurement received by the bio-information receiving unit; and

a displaying unit configured to display the generated image.

30. The image displaying system according to claim 25, wherein the image generating processor is configured to generate the image based on a comparison between the bio-information on the plurality of persons under management received by the second communications interface.

31. The image display device according to claim 26, wherein the image generating processor is configured to generate the image based on a comparison between the bio-information of the plurality of persons under management received by the communications interface.

35. The image displaying system according to claim 25, wherein

the system is configured to estimate emotions of the plurality of persons under measurement based on the bio-information received by the receiving unit, and the image generating processor is configured to generate the image based on the emotions estimated by the emotion estimating processor.

The following is an examiner's statement of reasons for allowance:

In light of the interview conducted between Examiner and Applicant's Representative on January 5, 2009, the Examiner reviewed the applied prior art, and agrees with Applicant that the claims presented on May 19, 2009 are patentable over the applied prior art.

The Examiner agrees that the applied prior art alone or in combination fails to disclose "generating an image including objects that interact with each other on the basis of relationships among the bio-information on the plurality of persons under measurement received by the receiving means." The prior art applied September 18, 2009, Blattner et al. in view of Hata et al., fail to disclose the aforementioned elements. In Blattner et al. as well as other art, avatars are animated based on user input and reactions to other user input. However, the generated images in the prior art do not include objects *interacting* with each other. Furthermore, the images generated do not represent a *relationship* between the bio-information of multiple people, but instead display of bio-information of individual people as separate avatars on a screen, or an image showing the reaction of one avatar to another avatar's data. Prior art showing reactions, such as Blattner et al., result in an image representing an analysis of one person's bio-information, and not a relationship among the bio-information on a plurality of persons.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kai Rajan whose telephone number is (571)272-3077. The examiner can normally be reached on Monday - Friday 9:00AM to 4:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry Johnson can be reached on 571-272-4768. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
